# SolarWinds Threat Monitor

## Designed to detect, respond to, and report on security threats in real time.

Protecting your customers from the latest security threats isn't always easy. You need to monitor for threats, and intrusions across all their devices, 24/7.

SolarWinds® Threat Monitor™ is designed to hunt threats and automatically correlate logs in real time from your customers' ecosystems, and analyzes them against multiple sources of continuously updated threat intelligence.

SolarWinds Threat Monitor was built by an MSSP for MSSPs and security-minded service providers. The platform was purpose-built from the ground up to be fast, scalable, flexible, and most of all, to deliver efficiencies when dealing with security events. Using a combination of multiconditional rules, threat intelligence, alarms, and log correlation work together to help remove noise and provide actionable notifications in real time.

Extensive alerting keeps you ahead of threats and comprehensive reporting helps meet compliance requirements.

For an MSSP or an MSP looking to grow your business, SolarWinds Threat Monitor is the cloud-based platform that can help you to detect, respond to, and report on security events for your customers' networks.

## KEY MSP/MSSP BENEFITS

» Centralized security monitoring

» Multitenant—ideal for MSPs and MSSPs

» Simple, scalable, rapid deployment

» Automated threat response

» White label

» Built by MSSPs for MSSPs

## FEATURES AT A GLANCE

Learn how SolarWinds takes an intelligent approach to threat monitoring.

### SECURITY INFORMATION AND EVENT MANAGEMENT (SIEM)

Collect log-file information from disparate sources to help hone in on the most critical threats by rapidly assessing intent and severity.

### MULTITENANT

A centralized dashboard provides insight into your customers.

### CONTINUOUSLY UPDATED THREAT INTELLIGENCE

Threat intelligence is continuously updated from multiple sources, designed to find threats across your on-premises and hosted data centers, and public cloud environments like Azure® or AWS®

### SIMPLE, FULLY-SCALABLE DEPLOYMENT

Deploy and start monitoring quickly. Easily scale capabilities to handle organizational growth.

### AUTOMATIC LOG CORRELATION

Designed to automatically correlate logs in real time from your customers' ecosystems and analyze them against multiple sources of near-continuously updated threat intelligence.

### UNEXPECTED SIMPLICITY

Powerful and intuitive threat monitor, to help you start solving problems right away.

### INTEGRATED INTRUSION DETECTION

Built to automatically analyze the amount and types of attacks and use this data to help create and implement actionable incident responses.

### HIGHLY-INDEXED, LOG SEARCH CAPABILITIES

Rapidly search and analyze thousands of logs to understand the nature of ecosystem threats and attacks.

### AUTOMATED INCIDENT RESPONSE

Automate intelligent responses to instantly remediate security incidents, removing the need for constant user interaction.

### COMPLIANCE AND REPORTING

Leveraging existing report templates, or create custom reports to fit your business needs to help you pass regulatory and compliance audits.

### BUILT BY AN MSSP FOR MSSPs AND SECURITY-MINDED SERVICE PROVIDERS

Based on our understanding and experience in security operations centers, Threat Monitor is designed to solve the security challenges in a way that works for you.
