

# Centralized Customer Management & Reporting

## YOUR CUSTOMERS DESERVE THE BEST PROTECTION

As the leader in Anti Data Exfiltration (ADX), we go beyond managing threats. Rather than focusing on perimeter defense, our preventative approach focuses on blocking the exfiltration of data from your customers devices. BlackFog Enterprise for Managed Service Providers prevents threats from disrupting your customers operations and dramatically reduces their risk of a ransomware attack or data breach.

As a trusted advisor, your customers rely on you to keep them safe and you can rely on BlackFog to provide multiple layers of defense against ransomware, spyware, malware, phishing and unauthorized data collection and profiling.

## TRADITIONAL APPROACHES ARE LOSING THE WAR ON RANSOMWARE

As cyberattacks and ransomware become more sophisticated, so must your approach. Perimeter defense techniques and anti-virus software is powerless against fileless polymorphic attacks. BlackFog approaches the problem differently by targeting threat vectors where it hurts most, when they try to replicate, activate, communicate or exfiltrate data. By neutralizing the attack at multiple points of its lifecycle it cannot move laterally within the organization or do any damage.

With the average organization taking 192 days to detect an attack, you can trust BlackFog to keep your customers out of the headlines and prevent them from becoming the next statistic.

## SECURE YOUR CLIENTS VALUABLE DATA

Today's ransomware attacks are focused on data exfiltration and extortion which ultimately leads to expensive and embarrassing data breaches. As the guardian of your customers most valuable asset – their data, preventing unauthorized data exfiltration from their devices has never been more critical. Protect your customers with 24-7 threat protection from BlackFog and ensure that no unauthorized data ever leaves their devices.

### ANTI DATA EXFILTRATION

Prevent cyberattacks across all endpoints and monitor data exfiltration from any network to ensure compliance with global privacy and data protection regulations.

### RANSOMWARE PREVENTION

Protect your intellectual property and the risks associated with ransomware, industrial espionage and prevent malicious activity from inside your organization.

## KEY BENEFITS

BlackFog's Anti Data Exfiltration decrease the risks associated with data loss and data breaches from external attacks and insider threats associated with industrial espionage.

### ON DEVICE PROTECTION

- ◇ Mitigate the risk of data loss through geofencing
- ◇ Minimize data collection on every endpoint
- ◇ Prevent unauthorized data collection and profiling
- ◇ Anonymize user behavior
- ◇ Protect your customers remote employees wherever they are

### VALUE ADDED SERVICES

- ◇ Provide monthly threat reporting and analysis
- ◇ Breach and Dark Web monitoring available
- ◇ Threat Hunting capabilities
- ◇ CISO as a Service
- ◇ Auditing and Compliance (coming soon)

### ENTERPRISE PROVIDER CONSOLE

- ◇ BlackFog Enterprise for Providers consists of endpoint agents and the Enterprise cloud console. The console allows you to manage all customer devices and access a centralized view of all threats and events generated at the endpoint.
- ◇ The console provides insights into the origin of threats with a consolidated view across all customers, while each customer receives access to a threat dashboard for their business.
- ◇ Monitor each customer by logical group and filter events and devices in the master view.
- ◇ Global settings and cloning provide rapid on-boarding.
- ◇ Analytics provide detailed impact assessments across your customers networks and devices.

## ABOUT BLACKFOG

Founded in 2015, BlackFog is a global cybersecurity company that has pioneered on-device Anti Data Exfiltration (ADX) technology to protect companies from global security threats such as ransomware, spyware, malware, phishing, unauthorized data collection and profiling. BlackFog uses behavioral analysis to preemptively prevent hackers from exploiting vulnerabilities in enterprise security systems and data structures.

BlackFog's preventative approach to security recognizes the limitations of existing perimeter defense techniques and neutralizes attacks before they happen at multiple points in their lifecycle. Trusted by corporations all over the world, BlackFog is redefining modern cyber security practices.

### DATA PRIVACY

Visibility into the unauthorized collection and transmission of user data across every device, within and beyond the corporate network.

### BREACH PREVENTION

Assess the impact of latent threats by monitoring the exfiltration of data from any network.
