

Shield your data. Stop leaks. Spot insider risks.

Data Loss Prevention and Insider Risk Management Solution

Invest in a DLP solution that offers comprehensive and adaptive data protection techniques, including both content and contextual inspection capabilities with a focus on identifying and managing insider risks.

Ravisha Chugh and Andrew Bales Gartner, "Market Guide for Data Loss Prevention", September 2023

Strike the right balance between data loss prevention measures and a thorough understanding of insider risks

Safetica offers a unified approach to protecting sensitive data by integrating proactive measures to prevent unauthorized data exposure with comprehensive methods to detect, analyze, and mitigate risks posed by insider threats within an organization.

Safetica covers today's most critical data security scenarios

Gain data visibility and identify sensitive data

Safetica helps you to discover and classify valuable data using its unique Safetica Unified Classification which combines analysis of file content, file origin and file properties. It offers complete visibility and continuous monitoring, never missing a beat to instantly identify, classify, and track sensitive data.

Prevent insider risks and promote security awareness

Anyone can make a mistake that could put your business at risk. With Safetica, you can analyze insider risks, detect threats, and mitigate them swiftly. Notifications about how to treat sensitive data can help raise awareness around data security and educate employees.

Protect sensitive and business-critical data

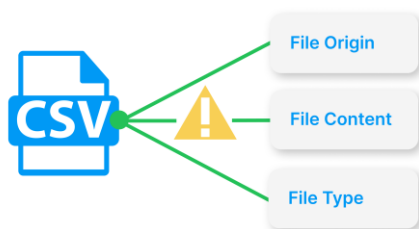

With Safetica, you can protect sensitive business- or customer-related data from accidental or intentional leakage. It audits all sensitive data activities no matter where the data move, so you can report and investigate where there's a risk of leakage or theft. These findings are key for data protection.

Detect and mitigate regulatory compliance violations

Safetica detects, prevents, and mitigates regulatory violations, aiding compliance with GDPR, HIPAA, ISO/IEC 27001, PCI-DSS, and more. Its audit capabilities facilitate incident investigation, while customizable policies ensure alignment with regulations and help to preemptively manage compliance risks.

Why choose Safetica?

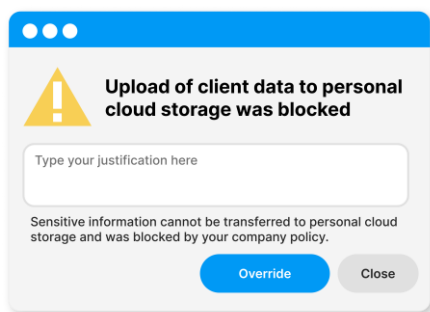

We combine **content inspection with context awareness** to more accurately identify sensitive data.

Detect all forms of sensitive data

With Safetica Unified Classification, you can detect and protect data based on content, origin, file type, and even third-party classifications.

Reduce false positives

Safetica combines content analysis and context awareness — where the data originated and where it has been — to more accurately classify data.

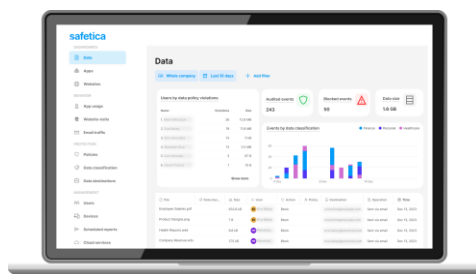

We enrich **DLP controls with behavior insights** to more accurately spot insider risks.

DLP enhanced with insider risk management

Safetica operates and protects in real time, guides your team according to your company policies and stops the most serious threats. It recognizes how your trusted insiders usually access data and automatically responds when behavioral changes are detected.

We provide **a centralized console** to more easily enforce policies and investigate incidents.

Intuitive User Interface

User-friendly interface designed with simplicity in mind. Navigate effortlessly through the system, empowering users to take control of their data security without extensive training.

Simplified Deployment Process

Flexible deployment options to businesses, with on-premise installation for maximum control and security, or cloud-based hosting for greater flexibility and scalability.

Easy set-up with predefined policies

Equipped with ready-to-use policies, allowing rapid implementation. Immediately and automatically detect and log incidents involving sensitive data, block risky applications and websites, and initiate universal monitoring.

Excellent
Data Protection
Made Easy

Safetica is a global software company that provides Data Loss Prevention and Insider Risk Management solutions to organizations of all shapes and sizes. Here at Safetica, we believe everyone deserves to know that their data is safe.
