Swedish Engineering at Heart

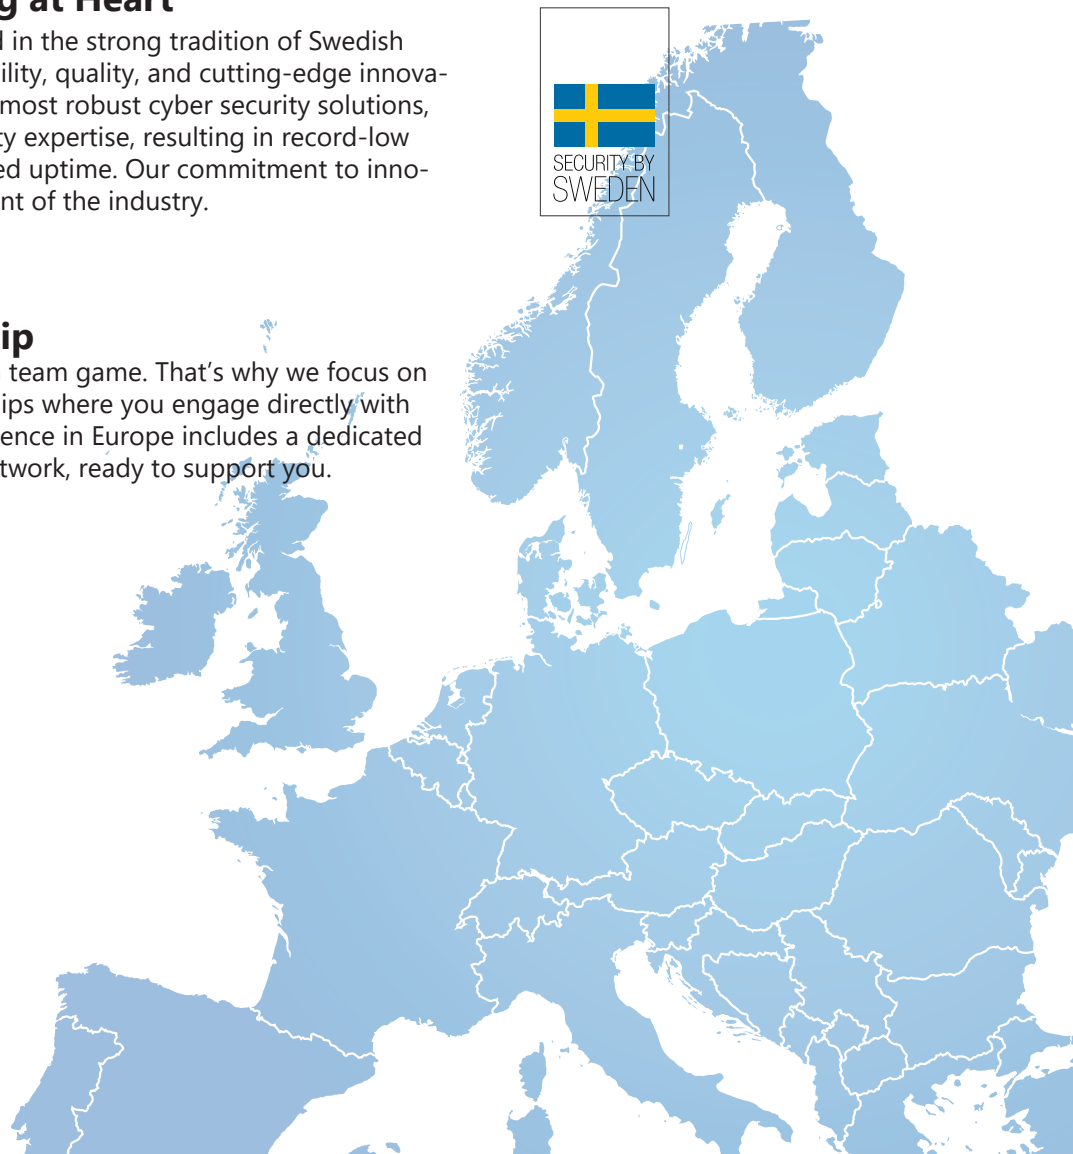

Clavister's solutions are rooted in the strong tradition of Swedish engineering, known for reliability, quality, and cutting-edge innovation. We believe we offer the most robust cyber security solutions, built on long-standing security expertise, resulting in record-low vulnerabilities and unparalleled uptime. Our commitment to innovation keeps us at the forefront of the industry.

A Caring Relationship

At Clavister, cybersecurity is a team game. That's why we focus on building long-term relationships where you engage directly with our domain experts. Our presence in Europe includes a dedicated team and a strong reseller network, ready to support you.

We've got you covered!

Network and Infrastructure Security Solutions

Our key network and infrastructure security solutions, designed to protect your critical assets from both external and internal threats. Clavister offers a full range of tailored solutions to meet your specific needs , which include:

Datacentre Security

Clavister's Datacentre Solution, powered by Clavister NetShield, delivers enterprise-grade security and advanced routing for robust and scalable datacentre environments.

It ensures seamless protection and optimised network traffic management, meeting the demanding needs of modern datacentres.

Zero-Trust Network Access

Clavister's Zero-Trust Network Access (ZTNA) solution is designed to provide secure remote access to corporate resources. It combines Clavister NetWall firewalls with the Clavister OneConnect VPN client.

Enhanced by Clavister's multi-factor authentication (MFA), ZTNA ensures that only authenticated users and devices can access your critical resources.

OT Security

Operational Technology (OT) environments are increasingly integrated into IT systems, making them vulnerable to cyber threats. A robust OT security firewall is essential to protect these critical systems.

The Clavister OT Security Solutions is a comprehensive solution for OT security available for Clavister NetWall.

Advanced Routing

Clavister's advanced routing capabilities include support for BGP and OSPF protocols, as well as route load balancing, ensuring optimised and resilient network traffic management.

Secure Remote Working

Ensures secure remote working by providing encrypted connections and strong authentication, safeguarding access to corporate resources from any location.

Micro Segmentation

Micro-segmentation divides the network into isolated segments, enforcing strict access controls and limiting lateral movement within the network to minimise the impact of potential security breaches.

Identity and Access Management Solutions

Our Identity and Access Management (IAM) solutions simplify and secure identity processes with strong authentication, such as Multi-Factor Authentication (MFA). Clavister's PhenixID brand offers a comprehensive IAM product portfolio to meet your specific needs.

PhenixID Authentication

PhenixID Authentication Essentials provides end-users and organisations a single point of authentication and an application portal for safe and easy access to their applications.

Installed on-prem and offers the full feature set of the PhenixID solution.

Clavister Cloud Authentication

Clavister Cloud Authentication Essentials provides end-users and organisations a cloud hosted version of the Authentication Solution. Offering a subset of managed features it's the perfect choice for organisations looking to add Multi-factor authentication and Role Based Access Control to existing Firewalls, for use cases like Secure Remote VPN.

Securely hosted in Europe!

Multi-factor authentication

Choose between several authentication methods and provide easy access when users login on-premise or to the cloud. Self enrolment portal for rapid activation.

Single Sign-On

PAS supports protocols, such as SAML 2.0, OAuth, OpenID Connect and ADFS 2019, to integrate different types of applications to support SSO.

Onboarding

With PAS, the onboarding process will be both secure and easy using self-service portal or delegated administration with securely verified identities.

Case Studies

Johannes-Diakonie

Public Sector: Johannes Diakonie

Johannes Diakonie faced challenges in managing user identities across multiple facilities, needing centralised management and stronger authentication. They required a solution that could securely connect and protect various hospitals and facilities.

Challenges:

- Decentralised identity management across multiple locations
- Lack of strong authentication mechanism, increasing security risks

Solution:

Clavister implemented an IAM solution that expanded to 3,000 users. The introduction of this authentication solution ensured secure operations with both internal and external service providers.

Benefits:

- Cost-effective and quick deployment
- Improved security and compliance with German standards
- Superior customer service

SMB: HESS Automobile

A mid-sized retail business with 65 points of sale needed to maintain a high level of customer satisfaction while securing online sales for 20 brands.

Challenges:

- Managing security across multiple retail locations.
- Ensuring secure, seamless online sales.

Solution:

Clavister implemented SD-Wan with routing and load balancing, application control and security use-cases to protect against bots, overload protection and unintended web browsing.

Benefits:

- Zero-touch provisioning and centralised management.
- High availability setup ensuring minimal downtime.
