IT and security ops are converging.
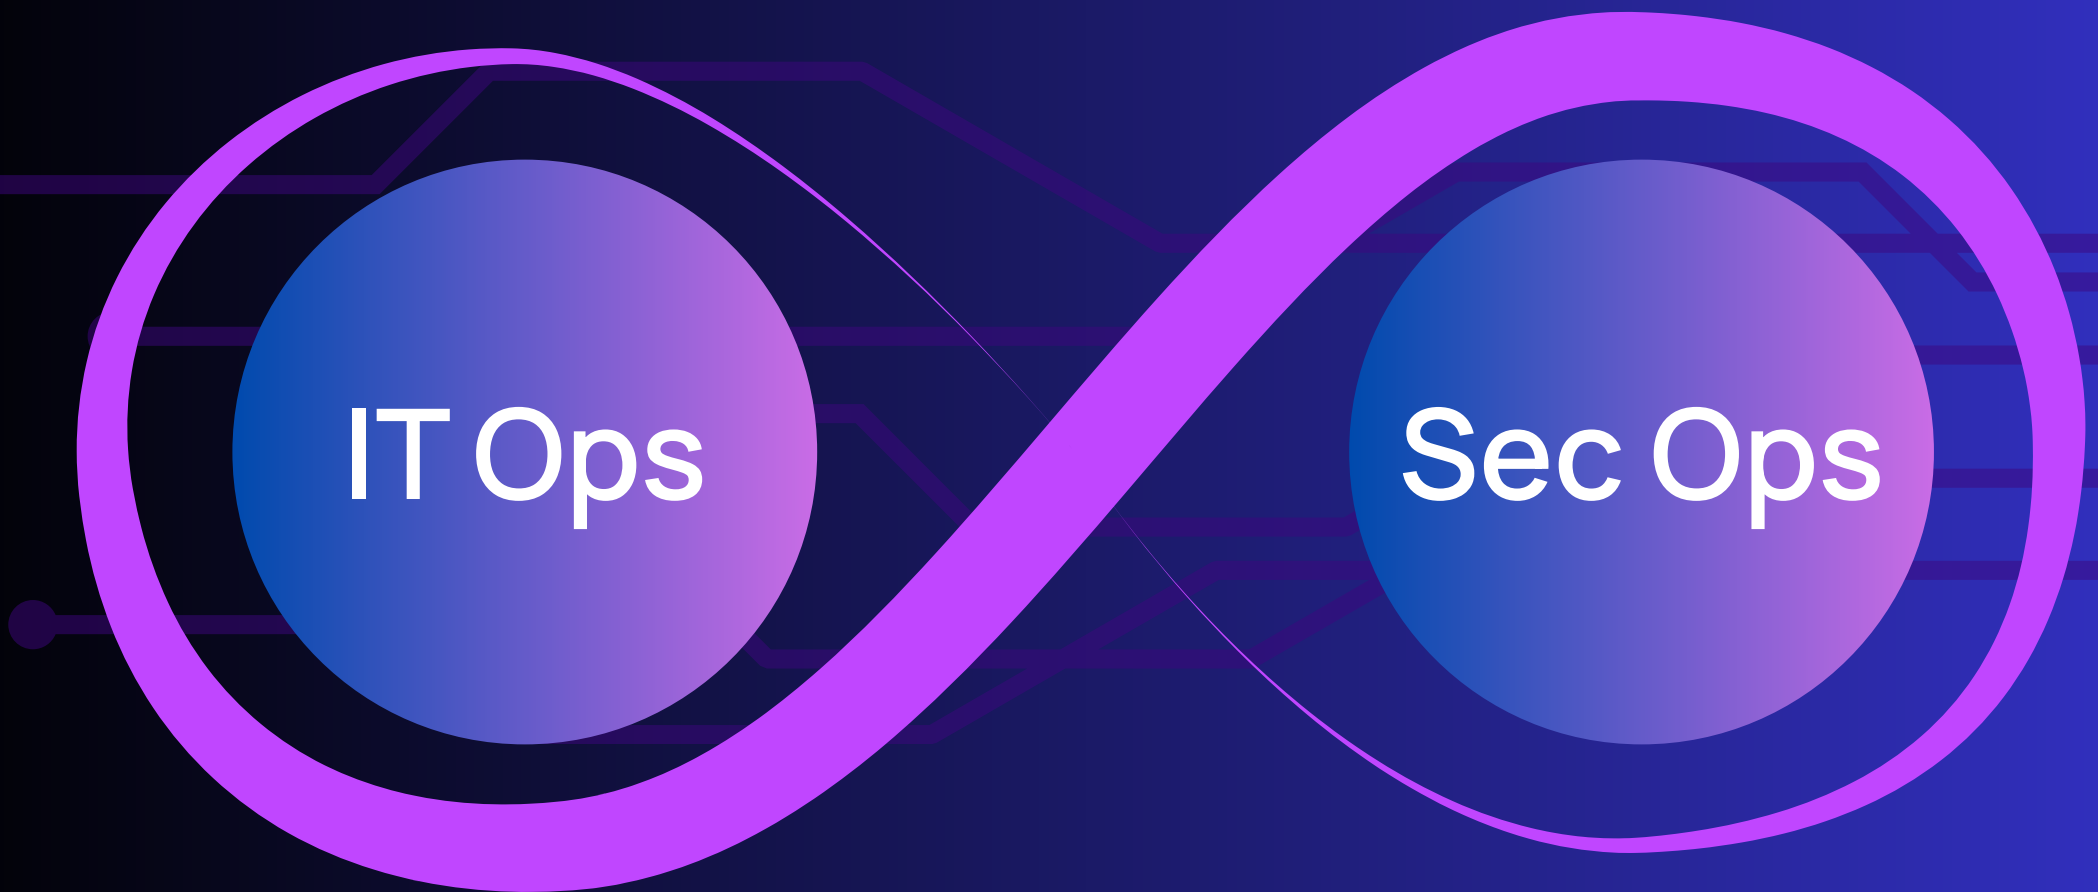

IT Ops

Sec Ops

Are you ready?

133

Average daily disclosed culnerabilities

138%

Year over year growth in vulnerabilities

93%

of IT teams use vulnerability management tools

Results: Siloed tools and lack of shared visibility

65%

of IT teams scan two or three times a month of less

Results: Longer exposure time and unnecessary risk

100%

pressure to meet compliance and insurance requirements

Results: Risks demand a faster, smarter response

Vulnerability Management:
Built into N-central and N-sight

Remediate

Identify

Continuous & Rapid

Prioritize

Remediate

Remediate vulnerabilities quickly

Patch, upgrade, remove applications or run scripts

Prioritize

Assess risk from scoring algorithms (CVSS, EPSS, CISA KEV)

Create custom prioritization lists, blending multiple data points (device type, risk score, CVE client/site)

Identify

Scan and identify vulnerabilities across 800+ applications

Maximum coverage with over 25k CVEs currently detected

Effortless Vulnerability Management

Gain visibility instantly by seeing a full list of vulnerabilities based on a scan of 800+ applications

Streamline the prioritization process with a **filter builder**

Identify patch availability at a glance directly from the vulnerabilities list.

Effortlessly remediate by removing applications, automating, patching or with remote access

Validate remediation effectiveness by re-checking the vulnerabilities list

Strengthen resiliency and open revenue opportunities by managing vulnerabilities anytime.
